

PATRICK C. GARNER CO., INC.
Northborough, Massachusetts

PROJECT SHEET:
Beaver Dam Brook Restoration, Framingham, Massachusetts

MassDEP required General Motors Company (GMC) to remove contaminants from more than 1,000-feet of a perennial river. GMC was then required to restore the entirety of the cleaned reach.

Patrick C. Garner Co., Inc., was retained by the Framingham Conservation Commission to peer review GMC's restoration proposal for the Notice of Intent hearings. Garner worked with the Commission and GMC's environmental consultants to

ensure that the river would be restored using best management practices.

Garner was subsequently hired to monitor the restoration over a 16-month period and provided field supervision and day-to-day operations management of both riverine restoration and adjoining areas of Bordering Vegetated Wetlands.

The project was successfully completed in 2009.
