

PATRICK C. GARNER CO., INC.
Northborough, Massachusetts

PROJECT SHEET:

Devens Solar, LLC, Moore Army Airport, Devens, Massachusetts

In 2010 Devens Solar, LLC, proposed construction of an 8-megawatt solar generation facility on a 45-acre lease portion of the former Moore Army Airfield in Devens, MA, in support of its application for a Level 2 Unified Permit.

In joint venture with Eggleston Environmental, this firm conducted a hydrologic analysis of existing and proposed stormwater runoff flows from the project area.

The intent of the analysis was to ensure that the project complied to the maximum extent possible with Department of Environmental

Protection Stormwater Management Standards.

Using the latest version of HydroCAD, Garner and Eggleston conducted a ground-based analysis of existing subsurface drainage and made full reconstruction/compliance recommendations to Devens Solar.
